Art Unit: 2829

Claims 5-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions and/or species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 11, 2005.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. There is no disclosure of how at least two die would be interconnected on a wafer. It is only stated that it could be done. It is further not clear how, whatever kind of interconnect is used, the wafer could be tested using the disclosed apparatus. The disclosure mentions TAB tape as the interconnect. Wouldn't the TAB tape create a lump that would interfere with testing using the disclosed apparatus? If the type of interconnect Applicants have in mind is prior art it is requested that Applicants supply references showing such prior art.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the wafer with an interconnect between at least two die on the wafer must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate

prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made_to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Corbett et al in view of Elder et al and Stopper. Corbett et al show a method of testing

die using biased plates one of which includes probes, but does not show the use of

such where wafers with interconnects between die are tested. Elder et al show, see the

abstract, the equivalence in testing die and wafers and Stopper shows a wafer scale

integrated circuit. It would have been obvious to one of ordinary skill in the art at the

time of the invention to have tested the apparatus of Stopper using the apparatus of

Application/Control Number: 10/799,258

Art Unit: 2829

Page 4

Corbett et al modified to test wafers as suggested by Elder et al because one of ordinary skill in the art would have realized that such would enable economical and accurate testing of a wafer scale device.
